

Lightweight Ram

CATEGORY: Recommended

SUMMARY: CarnaudMetalbox Engineering have improved the Ram on their 5000 Bodymakers.

In response to customer requests to improve the length of time it takes to complete functions such as Seal changes CMB have now made improvements to the design of the Light weight Ram.

The Ram can now be removed from the front of the machine, reducing machine down time as there is no longer the need for Ram removal from the rear of the machine.

The latest Lightweight Ram has an internal thread which screws onto a Ram Locator.

Tapered Locking Rings are fit to the outside diameter of the Ram and these are compressed by the Clamp Ring and Fastening Screws, locking the Ram securely in position.
