

reformat™

SINGLE TURRET SPRAY MACHINE

The reformat™ range combines forward thinking design with unrivalled functionality

Building on the success of the popular CMB 3200 spray machine, CMB Engineering is proud to launch the new Servo-driven reformat™ model incorporating smart technology.

This new concept machine offers improvements in process control – especially important with the growth in demand for new can sizes in the market.

The new advanced machine control system leads to reductions in spoilage and improvements in can quality, due to the ability to modulate speed whilst maintaining critical process parameters.

The new modular machine is more compact, reducing the footprint of the spray bank and offering better access for cleaning, whilst making it easier to increase capacity by adding new modules in the future.

Other features include quick changeovers with minimal tool use, lower maintenance requirements due to the use of Servos, the option of wireless control of individual machines in the spray bank and a practical approach to energy efficiency, which will offer significant savings over the conventional spray machine.

Features & Benefits

- Improvements in process control
- Reductions in spoilage
- Ability to modulate speed
- Reduced footprint
- Quick changeover
- Minimal tool usage
- Wireless control of individual machines

Refocus, Reinvent, Reformat

The reformat™ range combines forward thinking design with unrivalled functionality to equip canmakers with the tools necessary to meet unparalleled demand in the industry – not only for today, but well in the future.

The design principles revolve around the most powerful tool modern manufacturing equipment possesses: Intelligence. Through the confidence this instills, operators are able to focus on the bigger picture – the consistent production of high quality, flawless cans that deliver every time.
